

How to make a snapshot (picture) of your computer screen and what is on it.

- Press the print screen key that is usually located on the top row of the keyboard.
- Pressing this key creates a picture copy of what is on the screen. This picture is saved in the clipboard until you paste it someplace else.
- You can paste the picture into programs like Powerpoint and Photoshop or any program that accepts clipboard pictures.
- You may need to resize the photo once you paste it so it fit properly.
- If you don't want the entire screen and just a particular item up on your screen then press and continue to hold down the ALT key and press the print screen key.
