2018 Nature for Water Series

Town of Chapel Hill

CREATING RESIDENTIAL RAIN GARDENS

A free workshop

Chapel Hill Public Library Room B

Saturday, March 24, 2018 2:00—5:00 pm

Rain Gardens. They can help to filter stormwater of pollutants, temporarily contain runoff from heavy rains to reduce flooding, and capture drainage to recharge groundwater.

Join Mitch Woodward from NC Cooperative Extension Service to learn how simple rain gardens can be both functional and beautiful. You will learn how to locate, size, build, plant and maintain rain gardens. Part of the workshop will be spent outside renewing the library's industrial rain garden (bioretention basin) and learning more about rain garden construction. This workshop will be held rain or shine.
